

# Closing Remark

Hitoshi Tanaka

RIKEN SPring-8 Center

2017/12/12

## General Comments

- Thank you for joining our meeting
- This is the first SACLA international UC meeting aiming at communication and information-exchange between experimental users and facility side people
- The meeting successfully provided the current application capability and science activities at SACLA, which extract useful comments and feedbacks from the attendees and activate the discussion
- This kind of opportunity should be organized with a appropriate time interval

## How to reflect

- Diversity is quite important even in XFEL facilities
- SACLA never follows LCLS, PAL-XFEL, Euro-XFEL...
- What are strong points at SACLA? Maybe,
  - XFEL stability and reliability
  - High peak power with a short pulse duration
  - high performance photon optics and monitoring system
  - User friendly and functional end station system
  - **Good communication** among accelerator, beamline and detector researchers **and users**

**Your valuable inputs will be used to enhance SACLA's strong points in our strategic upgrade program**

SACLA

Euro-XFEL

LCLS, LCLS-II

Many smiles...

# ?? Three sisters

At last, many thanks to Yasuko and her team members for their great supports and beautiful arrangement
